## TECHNOLOGIES & APIs

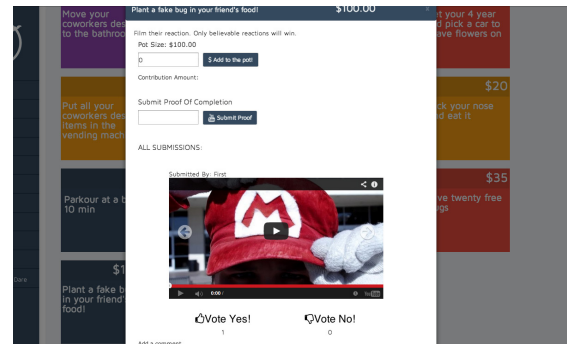

## CHALLENGES & SOLUTIONS

### COMPLEX DATABASE ASSOCIATIONS

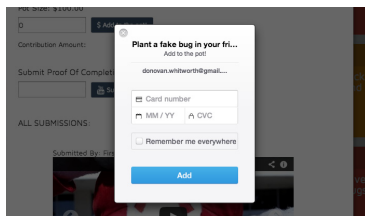

With 8 models sharing many relationships, organization and creativity was required to manage the associations between tables in the PostgreSQL database.

### SINGLE PAGE APPLICATION & LAYOUT

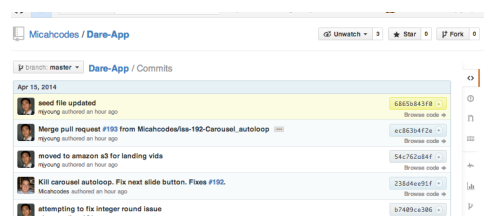

Strategic use of Ajax and overlays were implemented to execute instant search functionality, make database queries and display information without reloading the page.

### PAYMENT PROCESSING

Modified the Stripe API to update models and function within the flow of a single page application.

### PROCESS & WORKFLOW

Over 80 branches, 190 issues and 300 commits were assigned and completed via Github to maximize productivity.
